

NITESH VISHWAKARMA

Cloud & DevOps Engineer

Gorakhpur, Uttar Pradesh, India | niteshvishwakarma8574@gmail.com | +91-8574591701 | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Cloud & DevOps Engineer with hands-on, production-style experience across AWS, Docker, Linux system administration, and Python automation. Built a real-time AWS monitoring system (Python/Boto3) that cut manual health checks by ~40%, and a self-healing multi-tier AWS architecture using EC2, ALB, and Auto Scaling with automatic instance recovery. Comfortable working across Cloud Support, DevOps, System/Linux Administration, IT Support, and Network Engineering functions, with strong fundamentals in troubleshooting, incident monitoring, IAM/security, and infrastructure automation. Quick learner, reliable communicator, and ready to contribute from day one in an entry-level or trainee engineering role.

CORE TECHNICAL SKILLS

- Cloud Platforms:** AWS (EC2, S3, VPC, IAM, RDS, Lambda, CloudWatch, ELB, Auto Scaling, EKS), AWS CLI
- DevOps & Infrastructure:** Terraform (IaC), Docker, Kubernetes, Ansible, Git/GitHub, GitHub Actions, Jenkins, GitOps, CI/CD
- System & IT Support:** Linux/Unix Administration, Shell Scripting, Process & File-Permission Management, Log Analysis, Troubleshooting
- Networking:** VPC Design, Subnetting, Route Tables, Security Groups, NAT Gateway, Load Balancing, Multi-AZ Architecture
- Security & Governance:** IAM, CloudTrail, AWS Config, Least Privilege Access, Identity & Access Management
- Monitoring & Observability:** Amazon CloudWatch, Metrics, Alerting, Incident Monitoring & Response
- Programming & Automation:** Python (Boto3), Bash, SQL, YAML
- Soft Skills:** Problem Solving, Analytical Thinking, Communication, Collaboration, Ownership, Fast Learner

KEY PROJECTS

AWS Cloud Monitoring System

Apr 2025 – Jun 2025

Technologies: AWS (EC2, CloudWatch) • Python • Boto3 | GitHub: [aws-cloud-monitoring-system](#)

- Designed and built a real-time monitoring solution for multiple EC2 instances using CloudWatch dashboards and Python (Boto3), replacing manual status checks with automated health tracking.
- Cut daily manual monitoring effort by ~40% by scripting automated resource checks that previously required logging into each instance individually.
- Configured custom CloudWatch alarms for CPU spikes, downtime, and performance anomalies, enabling faster detection of issues before they caused outages.

AWS Auto-Healing Infrastructure (High Availability System)

Jul 2025 – Sep 2025

Technologies: AWS (EC2, ALB, Auto Scaling, SNS, CloudWatch) | GitHub: [aws-auto-healing-architecture](#)

- Designed a self-healing, multi-tier AWS environment using EC2, an Application Load Balancer, and Auto Scaling Groups to keep the application available under instance failure or load spikes.
- Implemented automatic instance replacement via Auto Scaling health checks, removing the need for manual intervention when an instance became unhealthy.
- Set up CloudWatch monitoring with SNS alerts so infrastructure issues were flagged immediately, rather than discovered after impact.

CloudOps Guardian – AI-Powered Cloud Governance & FinOps Platform

Oct 2025 – Dec 2025

Technologies: AWS • Terraform • Python • Docker • FastAPI | GitHub: [CloudOps-Guardian](#)

- Designed a self-healing, multi-tier AWS environment using EC2, an Application Load Balancer, and Auto Scaling Groups to keep the application available under instance failure or load spikes.
- Implemented automatic instance replacement via Auto Scaling health checks, removing the need for manual intervention when an instance became unhealthy.
- Set up CloudWatch monitoring with SNS alerts so infrastructure issues were flagged immediately, rather than discovered after impact.

EDUCATION

Bachelor of Computer Applications (BCA) — Cloud Computing & Security

2024 – 2027

Amity University Online | SGPA: 8.45 (Currently Pursuing)

ACHIEVEMENTS

- Built production-style AWS cloud projects spanning real-time monitoring and self-healing high-availability infrastructure.
- Maintained 8.45 SGPA while specializing in Cloud Computing & Security.
- Actively expanding hands-on expertise in Terraform, Kubernetes, and Jenkins through ongoing infrastructure projects.
